## Education

### Computer Science Engineering, ITESO, Guadalajara

August 2017 — August 2022

## School/Personal Projects

### Cinema web app

Built on CSS, JavaScript, html, also full developed CRUD API. Allows users to make movies playlists(3-member team).

### Hospital Database

Database that emulates a hospital database with SQL server, based on the Entity-Relationship Diagram we designed.

### Server Interconnection

Database, Front-End, Back-End server Interconnection using ubuntu commands

### Battleship game

Built on Java and using graphics. Two player's game.

### React Calendar (No libraries)

You can write activities and they will be save into database. The data saves on real time, and it will still be visible when reloading the page.

### Wellness mobile app

Built on Dart using Flutter, getX and Firebase. CRUD gym exercises and routines, also a store of protein that sends the receipt by email(3-member team)
